

SINGLE CURTAIN NATURAL VENTILATION

AN EFFECTIVE AND ECONOMICAL CURTAIN!

- Silent, inexpensive, and without a maintenance system
- Opening reaching 12 feet (3.66 meters)
- Enables a wide range of luminosity
- Now available in 2 variants of curtains
 - 10 oz. (283 g) high density braided polyethylene
 - 15 oz. (425 g) vinyl covered braided polyester
- Offered with W cables, aluminum posts, or a strap with a bender system
- Can be operated with our transmission shaft system or by a high-performance actuator

**FIXED OR REMOVABLE
SINGLE CURTAIN ►**

RELIABLE AND WITHOUT ADJUSTMENT SYSTEMS!

The transmission shaft system enables you to have a more reliable system by eliminating pulley adjustments that are necessary with traditional systems. A main steel rod is installed at the top of the opening all along the building and serves as a transmission shaft for the curtains. Once the rod is put into motion, it enables the cables that are holding the curtains to roll up around it, also making the curtains go up or down automatically. The Secco actuators are heavy-duty and reliable. They are always supplied with a potentiometer for more precision. There is also a possibility to replace the corner pulley with a high-performance chain system to eliminate the corner tension on the main steel cable.

AUTOMATISATION BY TRANSMISSION SHAFT SYSTEM OR ACTUATOR ►
