

INFLATABLE CURTAIN

NATURAL VENTILATION

FINALLY AN INSULATED AND CLEAR CURTAIN!

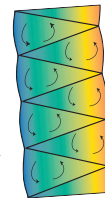

- Now available in combination with ISOCELL® "Z" technology (also available with standard 2 layers curtains)
- Silent, automatic, and without maintenance system
- Opening reaching 10 feet (3.28 meters)
- Enables a wide range of luminosity
- During cold weather, with only one blower, you benefit from more insulation - thanks to the ISOCELL® "Z" technology or the 2 layers of curtain
- Made of U.V. treated PVC vinyl with polyester thread
- Offered with W cables, aluminum posts, or a strap with a bender system
- Can be operated with our transmission shaft system or by a high-performance actuator

RELIABLE AND WITHOUT ADJUSTMENT SYSTEMS!

The transmission shaft system enables a more reliable system by eliminating pulley adjustments that are necessary with traditional systems. A main steel rod is installed at the top of the opening all along the building and serves as a transmission shaft for the curtains. Once the rod is put into motion, it enables the cables that are holding the curtains to roll up around it, also making the curtains go up or down automatically. The Secco actuators are heavy-duty and reliable. System with linear actuator available.

AUTOMATION BY TRANSMISSION SHAFT SYSTEM OR ACTUATOR ▶
